

10Alytics Business Anniversary Discount

December Weekend AI Training Programs

- **Start Date:** Saturday, **6th December 2025**
- **Schedule:**
 - Saturdays 10AM–1PM (3 hours)
 - Sundays 2PM–5PM (3 hours)
- **Duration:**
 - 8 weekends → 16 sessions per program (Total 24 hours each)
- Runs till **February 8th, 2025**

Courses/Prices:

- 1.) **AI Automation Engineer (Build LLM Apps and AI Agents)- 100k (discounted price), ~~200k (Original Price)~~, 50% discount**
- 2.) **Generative AI for Data Analysts & Professionals- 100k (discounted price), ~~200k (Original Price)~~, 50% discount**
- 3.) **Generative AI in Business Analysis- 100k (discounted price), ~~200k (Original Price)~~, 50% discount**
- 4.) **Generative AI for HR Analysts & Professionals- 100k (discounted price), ~~200k (Original Price)~~, 75% discount**
- 5.) **Generative AI in Project Management- 100k (discounted price), ~~200k (Original Price)~~, 75% discount**

Curriculum 1: AI Automation Engineer (Build LLM Apps and AI Agents)

Course Overview

This course equips participants with the skills to design, build, and deploy AI-powered automation systems using Large Language Models (LLMs), APIs, and intelligent agents. It blends **theory, coding, and real-world projects** to prepare participants to become AI Automation Engineers.

Target Audience

- Software engineers & developers
- Data professionals exploring AI engineering
- Product managers interested in AI-powered solutions
- Tech enthusiasts seeking to build AI-driven tools

Course Objectives

- Understand foundations of LLMs and AI automation
- Learn to design and implement AI-driven workflows
- Build AI agents capable of reasoning, planning, and acting
- Connect AI to APIs, databases, and external tools
- Deploy production-ready AI automation solutions

Learning Outcomes

By the end of this course, participants will be able to:

- Explain how LLMs and AI agents work in automation systems
- Build custom AI workflows using frameworks like LangChain / LlamaIndex
- Integrate LLMs with real-world data sources and APIs

- Create multi-step AI agents for customer support, operations, and reporting
- Deploy and monitor AI automation apps in real-world environments

Week 1: Introduction to AI Automation & LLMs

Saturday:

- Introduction to AI Automation Engineering
- Understanding LLMs, Agents, and Automation
- How APIs Power Automations (Client–Server model)
- Tools Overview: LangChain, n8n, Make, Zapier, Flowise, CrewAI
- Function Calling in LLMs: how models execute structured tasks
- Prompt Engineering Basics for AI workflows

Sunday:

- Setting up your AI Engineering Environment (VS Code, Python, API keys, n8n)
- Hands-on: Build your first n8n workflow
- Integrate an LLM (e.g., GPT API) to automate email summaries
- **Mini Project:** Automate your daily summary using n8n + OpenAI

Week 2: Document Search, Memory, and Retrieval-Augmented Generation (RAG)

Saturday:

- What is RAG (Retrieval-Augmented Generation)?
- Understanding embeddings and vector databases (ChromaDB, FAISS)
- Tools: Flowise, LlamaIndex, OpenAI API
- Chunking and indexing: how to “teach” LLMs your data
- Practical Demo: Train an AI on internal company policies

Sunday:

- Adding Memory & Context to AI Workflows
- Build an AI Knowledge Assistant using Flowise + Airtable memory store
- Persistent User Context and Follow-up Conversations

- **Mini Project:** Internal Policy Advisor Agent (RAG + Memory)

Week 3: Advanced Workflow Automation with APIs and AI

Saturday:

- Multi-step automation logic (Triggers, Conditions, Branching)
- Connecting AI Agents with APIs: Google Sheets, CRMs, Notion, Slack
- Integrating third-party services (Zapier, n8n, Make.com)
- API authentication, rate limits, and security basics

Sunday:

- AI Agents Calling APIs : function calling and tool use
- Build an AI Task Manager that fetches data, updates tasks, and reports progress
- Error handling and retry logic in AI automation
- **Mini Project:** Automated Business Operations Assistant

Week 4: Multi-Agent Systems and Reasoning Workflows

Saturday:

- Understanding Multi-Agent Systems
- Role-based AI Agents (Planner, Researcher, Coder, Reporter)
- Coordination & Delegation in LangGraph and CrewAI
- Integrating external tools (search, calculation, database)

Sunday:

- Build a Multi-Agent Research System (Planner + Researcher + Summarizer)
- Managing Conversations & Task Handoffs Between Agents
- **Mini Project:** AI Research and Reporting Agent

Week 5: Conversational AI and Voice Agents

Saturday:

- Introduction to Voice AI: Overview of Retell AI, VAPI, and ElevenLabs
- Creating Voice Agents for Booking, Support, and Sales
- Twilio Setup for Phone-Based AI Agents
- Designing Conversational Flows

Sunday:

- Building a Voice AI Receptionist using Retell AI + n8n + Cal.com
- Enhancing Personality and Tone in Voice Agents
- Deploying AI Voice Agents for real calls
- **Mini Project:** AI Appointment Booking Voice Agent

Week 6: AI Deployment, Monetization & Business Applications**Saturday:**

- Deployment Options: Streamlit, Gradio, Notion, Telegram, WhatsApp
- Integrating LLM Apps into Existing Business Workflows
- Monitoring and Updating Deployed Agents
- **Demo:** Deploy Your Custom Automation Agent

Sunday:

- Monetization Models for AI Automation Services
- Productization: Packaging Your AI Agent for Clients
- Building Your AI Portfolio & Case Studies
- **Mini Project:** Deploy and Present Your Demo AI App

Week 7–8: Capstone Project: Build and Deploy a Real-World AI Automation Solution**Objective:**

Apply everything learned to design, build, and deploy a full-scale AI automation system.

Week 7: Design & Build Phase

- Identify a real-world problem in any of these domains:
 - Customer Support & Chat Automation
 - Research & Report Generation
 - Financial Insights & Data Summaries
 - Sales Outreach & Lead Qualification
 - AI Workflow Management Tool
- Design Architecture: LLM, Memory, Data, API, and Interface
- Implement Multi-Agent Logic and Custom APIs
- Midweek Check-in & Mentor Review

Week 8: Deployment & Presentation Phase

- Deploy project (Gradio, Web Embed, or Telegram/WhatsApp Bot)
- Integrate performance monitoring & logging
- Prepare Documentation and Demo Video
- Present Capstone Project to Panel
- Peer Review
- Feedback
- **Final Showcase**
- **Certification Ceremony**

Tools & Frameworks Covered

- **LLMs:** OpenAI GPT, Anthropic Claude, Ollama
- **Frameworks:** LangChain, LlamaIndex, Flowise, CrewAI
- **Automation Tools:** n8n, Zapier, Make.com
- **Databases:** ChromaDB, Pinecone, Airtable
- **Voice AI Tools:** Retell AI, VAPI, ElevenLabs
- **Deployment:** Streamlit, Gradio, Notion, Telegram/WhatsApp Bot

Curriculum 2: Generative AI for Data Analysts & Professionals

Course Overview

This course helps analysts and professionals **supercharge data workflows** with Generative AI. It blends **data analytics fundamentals** with **AI-driven automation**, enabling participants to analyze, visualize, and present insights faster with tools like ChatGPT, Power BI, and Python-based LLM frameworks.

Target Audience

- Data analysts, business analysts, BI professionals
- Finance, operations, and strategy professionals who work with data
- Anyone interested in applying Generative AI to data

Course Objectives

- Teach how Generative AI can enhance data analysis workflows
- Provide practical skills for AI-assisted data cleaning, querying, and visualization
- Enable analysts to create compelling AI-powered dashboards and reports
- Demonstrate how to integrate LLMs with BI tools and databases.

Learning Outcomes

By the end of this course, participants will be able to:

- Use LLMs to automate data cleaning, querying, and reporting
- Generate SQL queries and Python code from natural language
- Build AI-assisted dashboards in Power BI / Tableau
- Apply AI to business forecasting and trend analysis
- Present insights using storytelling enhanced by Generative AI

Week 1: Foundations of Generative AI in Data Analytics

Saturday (3h): Setting the Stage

- The Evolution of the Data Analyst Role: From Reporting → Automation → AI Copilots
- Overview of Generative AI (LLMs, Diffusion Models, RAG, Agents)
- How AI integrates into analytics tools (SQL, Power BI, Excel, Tableau)
- Essential Tools: ChatGPT, Claude, OpenAI API, Power BI Copilot, Flowise
- AI-Assisted Analysis Demo: From Prompt to Insights in Excel & Power BI

Sunday (3h): Prompt Engineering for Data Analytics

- Prompt engineering concepts: zero-shot, few-shot, chain-of-thought
- Designing prompts for data extraction, cleaning, summarization, visualization
- Hands-On: Using AI to clean messy data and summarize datasets
- **Mini Project:** Build your first *AI-Powered Data Cleaning Assistant*

Week 2: AI Automation: Building the “AI Data Analyst”

Saturday (3h): Automating Workflows with n8n

- What is n8n and why automate analytics?
- Installation & interface overview
- Workflow logic: triggers, actions, conditions, APIs
- Building automation pipelines for routine data tasks
- **Hands-On:** Create an automated data refresh & report generation workflow

Sunday (3h): Multi-Agent Analytics Systems

- From single AI assistants to multi-agent “AI employees”
- Role assignment: Data Fetcher, Cleaner, Analyzer, Reporter
- Building an automated reporting system with memory & feedback
- **Mini Project:** *AI Analyst Employee*: Automatically monitors data, analyzes KPIs, and sends weekly reports

Week 3: AI Tools for Every Data Analyst

Saturday (3h): Exploring AI-Powered BI Tools

- Deep dive: Julius AI, Quadratic, Bricks, Zebra AI
- AI-native dashboards & conversational analytics
- Comparing tools on real datasets: accuracy, speed, interpretability
- **Hands-On:** Build insights on one dataset using 2 different AI BI tools

Sunday (3h): AI for SQL Mastery

- Introduction to Text-to-SQL and SQL Copilots
- Tools: AI2SQL, SQLAI.ai, Chat2DB, and Microsoft Fabric SQL Copilot
- Natural language query generation and optimization
- **Mini Project:** Build an AI pipeline that converts natural language to SQL and visualizes results.

Week 4: Generative AI in Visualization & Storytelling

Saturday (3h): AI-Powered Visualization

- AI-assisted charting, narrative visuals, and dashboard explanations
- Power BI + Copilot / Tableau GPT walkthrough
- Connecting AI APIs to dashboards for dynamic summaries
- **Hands-On:** Generate automated visuals and commentary using AI

Sunday (3h): Data Storytelling with Generative AI

- Turning numbers into narratives, the storytelling framework
- Automating executive summaries, commentary, and insights
- **Mini Project:** *AI Data Storyteller*, Build a dashboard that narrates its insights automatically

Week 5: Advanced Enterprise AI Tools & Integrations

Saturday (3h): Microsoft Fabric for AI-Powered Analytics

- Introduction to Microsoft Fabric: OneLake, Lakehouses, and Pipelines
- Building AI-ready data architectures
- Integrating Power BI, Dataflows, and AI Models
- **Hands-On:** Create a Fabric pipeline and connect it to AI Copilot

Sunday (3h): AI + Python + Excel Integration

- Using AI to generate Python scripts for data analysis
- AI-assisted Excel formula generation and transformation
- Automating Excel dashboards with GPT + VBA
- **Mini Project:** *Excel to Power BI Automation Pipeline*

Week 6: Building Business Intelligence with Generative AI

Saturday (3h): Predictive & Prescriptive Analytics

- AI forecasting and trend detection using LLMs
- Scenario modeling and sensitivity analysis
- AI-driven recommendations for decision-making
- **Hands-On:** Predictive analysis using AI-generated code and Power BI visuals

Sunday (3h): AI Agent Deployment & Workflow Integration

- Deploying AI analytics assistants via Streamlit, Notion, or Web embeds
- Integration with Slack, Notion, or Google Sheets for live reporting
- Portfolio preparation and project planning for capstone
- **Mini Project:** *Deployable AI Reporting Assistant*

Week 7–8: Capstone Project — AI-Driven Business Insights Solution

Objective:

Apply all course learnings to design, build, and deploy a comprehensive AI-powered analytics project.

Week 7: Design & Build Phase

- Define your project goal and data source
Choose one focus area:
 - AI-Powered Executive Dashboard
 - Automated Financial Narratives & Insights
 - Predictive Sales and Customer Analytics Assistant
 - AI Data Cleaning + Visualization Pipeline
- Plan architecture: data source → LLM → visualization → delivery
- Build automation workflows, generate insights, and test results
- Midweek mentor check-in

Week 8: Deploy & Present Phase

- Deploy your AI analytics solution (Power BI, Streamlit, Fabric, or Excel AI)
- Add interactive summaries and dashboards
- Prepare executive report + presentation deck
- **Final Showcase:** Present your capstone to panel & peers
- Portfolio enhancement + certification ceremony

Tools & Frameworks Covered

- **LLMs:** ChatGPT, Claude, Gemini
- **Automation Tools:** n8n, Zapier, Make.com
- **BI Tools:** Power BI, Tableau, Julius AI, Quadratic, Bricks, Zebra AI
- **Programming:** Python, SQL, Excel, DAX
- **Data Infrastructure:** Microsoft Fabric, OneLake, Lakehouses
- **Visualization:** Power BI Copilot, Streamlit, AI dashboards

Assessment

- Weekly hands-on labs and mini-projects
- Capstone project presentation and peer review
- Class participation and portfolio completion

Key Benefits

- Learn how to integrate AI with analytics workflows
- Automate data cleaning, visualization, and storytelling
- Gain proficiency in the newest AI data tools and platforms
- Build an end-to-end AI Data Insights project for your portfolio
- Earn a **Certificate in Generative AI for Data Analytics** upon completion

Week 1: Foundations of Generative AI in HR Analytics

Saturday (3h): Setting the Stage

- The Evolution of HR Analytics: From Descriptive → Predictive → Prescriptive → AI-Driven
- Introduction to Generative AI, LLMs, and AI copilots for HR
- HR Data Sources: HRIS, ATS, LMS, Performance Systems, Engagement Platforms
- Tools Setup: ChatGPT, Power BI Copilot, Excel, Google Sheets, AI Survey Tools
- **Hands-On:** Analyze a sample employee satisfaction dataset with AI
- **Mini Project:** *AI-Powered HR Dashboard — Attrition & Engagement Snapshot*

Sunday (3h): Prompt Engineering for HR Use Cases

- Prompt design for HR data tasks: turnover, DEI, training effectiveness, workforce segmentation
- Advanced prompting (few-shot, CoT, role-based prompting for HR scenarios)
- Using AI for workforce summaries and automated reporting
- **Mini Project:** *AI-Driven Workforce Analytics Summary (with key HR metrics)*

Week 2: AI Automation in HR Workflows

Saturday (3h): Workflow Automation with n8n

- Why HR needs automation: speed, consistency, and scalability
- n8n overview: triggers, actions, nodes, and integrations
- Common HR automation examples: recruitment dashboards, survey summaries, compliance reporting
- **Hands-On:** Build a *Weekly HR Metrics Report Generator* (auto-updating dashboard)

Sunday (3h): Multi-Agent Systems in HR Analytics

- From single AI assistant → multi-agent HR analyst system
- Building an *AI Employee* for HR reporting, compliance, and engagement analysis
- AI memory for tracking monthly workforce changes
- **Mini Project:** *AI HR Analyst Employee* — Automatically monitors absenteeism, creates summaries, and emails HR leadership

Week 3: AI Tools for Modern HR Analysts

Saturday (3h): Exploring AI-Powered HR Analytics Tools

- Julius AI: Conversational HR dashboards
- Bricks AI & Zebra AI: AI-native visual analytics tools
- DataGPT: Natural language querying for HR datasets
- **Hands-On:** Compare tools on a recruitment dataset to generate hiring insights

Sunday (3h): AI for SQL & HR Databases

- Introduction to Text-to-SQL and SQL copilots
- Tools: SQLAI.ai, Chat2DB, Microsoft Fabric SQL Copilot
- Query HR datasets for performance, attrition, and compensation analytics
- **Mini Project:** *AI-Driven Attrition Forecast Query & Visualization Pipeline*

Week 4: HR Data Visualization & Storytelling with AI

Saturday (3h): AI-Powered Visual Reporting

- Power BI Copilot & AI visualization walkthrough
- Automating HR dashboards for monthly reports and leadership presentations
- Integrating AI-generated summaries directly into dashboards
- **Hands-On:** Create a *Dynamic AI HR Dashboard* with auto-generated narratives

Sunday (3h): Storytelling with Generative AI

- Turning HR data into insights and executive-ready stories
- Generating contextual summaries and policy recommendations
- **Mini Project:** *AI HR Storyteller: Visual + Narrative HR Insights*

Week 5: Advanced HR Analytics with AI Integration

Saturday (3h): HR Forecasting & Predictive Analytics

- Attrition and retention prediction using AI
- Predictive modeling: promotions, engagement, absenteeism
- AI-generated Python scripts for regression & forecasting
- **Hands-On:** *Build a Predictive Attrition Model using AI*

Sunday (3h): AI Integration with HR Systems

- Integrating AI with HR platforms (Workday, SAP SuccessFactors, BambooHR)
- Real-time HR analytics via API and RAG pipelines
- Case Study: *AI-Driven Employee Retention Strategy*
- **Mini Project:** Connect AI insights to HRIS dashboard

Week 6: Applied Enterprise AI & Workforce Strategy

Saturday (3h): Microsoft Fabric for HR Analytics

- Overview: OneLake, Lakehouses, and HR data pipelines

- Building AI-ready HR data architectures
- Connecting Power BI to Fabric for unified insights
- **Hands-On:** *Microsoft Fabric HR Data Pipeline*

Sunday (3h): HR Decision Intelligence with AI

- Workforce planning & capacity analytics using Generative AI
- Creating AI-powered “People Intelligence” dashboards
- **Mini Project:** *AI Workforce Planning Assistant*

Weeks 7–8: Capstone Project – AI-Driven HR Analytics Solution

Week 7: Design & Development Phase

- Define project scope & problem statement
Choose one focus area:
 1. AI-Powered Employee Attrition Dashboard
 2. Automated Recruitment Pipeline Analytics
 3. Predictive Workforce Planning Assistant
 4. AI-Powered Employee Engagement & Sentiment Analysis
- Data collection & cleaning (synthetic or provided dataset)
- Workflow design using Power BI + LLM integration
- Midweek mentor check-in for progress review

Week 8: Implementation & Presentation Phase

- Complete dashboard design and AI integration
- Add narrative storytelling and executive summary features
- Deploy solution using Power BI, Streamlit, or Notion
- **Final Showcase:** Present HR AI solution to peers and instructors
- Peer feedback & improvement round
- Portfolio submission & certification ceremony

Tools & Frameworks Covered

- **AI & LLMs:** ChatGPT, Claude, Gemini
- **Automation:** n8n, Zapier, Make.com
- **BI & Visualization:** Power BI, Tableau, Bricks AI, Julius AI, DataGPT
- **Programming:** Python, SQL
- **Data Infrastructure:** Microsoft Fabric, OneLake, HRIS
- **Survey & Sentiment Tools:** Typeform, Google Forms, MonkeyLearn, Flowise

Assessment

- Weekly hands-on labs and automation challenges
- Mid-course project (Weeks 4–5)
- Capstone project presentation and peer review (Weeks 7–8)
- Participation and applied problem-solving

Key Benefits

- Master how to integrate AI into HR analytics and workforce planning
- Automate HR dashboards, reports, and compliance summaries
- Gain practical experience with LLMs and HRIS integrations
- Build a professional AI HR analytics portfolio
- Earn a **Certificate in Generative AI for HR Analytics & Workforce Insights**

Generative AI for Project Management

Course Overview

The Generative AI for Project Management course is designed to equip aspiring and practicing project managers with the skills to leverage Artificial Intelligence (AI) — particularly Generative AI tools, copilots, and automation platforms — to improve decision-making, productivity, communication, and project delivery outcomes.

Over four intensive weeks (plus a capstone), participants will explore how AI integrates into each phase of the project lifecycle — from initiation and planning to execution, monitoring, and agile delivery. The course emphasizes hands-on experience, guiding learners to build AI-assisted workflows using tools such as ChatGPT, Gemini, ClickUp AI, Notion AI, Asana AI, Wrike AI, n8n, and Zapier.

Participants will leave the program ready to act as AI-empowered project leaders, capable of automating repetitive tasks, optimizing resources, and producing data-driven insights that enhance project efficiency and stakeholder engagement.

Target Audience

This course is ideal for:

- Project Managers seeking to integrate AI tools and automation into daily operations.
- Aspiring Project Managers who want to enter the field with future-ready skills.
- Business Analysts, Product Owners, and Scrum Masters aiming to improve planning, communication, and reporting with AI.
- Team Leads and Coordinators involved in agile and cross-functional delivery environments.
- Consultants and Entrepreneurs who manage digital transformation or AI-enabled projects.
- PMO professionals responsible for improving governance, reporting, and performance management.

No prior coding experience is required — just a working understanding of project management principles.

Course Objectives

By the end of the course, learners will be able to:

1. Understand Generative AI Fundamentals:

- Explain how Generative AI models, copilots, and automation platforms can be applied across the project lifecycle.

2. Apply AI to Project Initiation and Planning:

- Use AI tools to create business cases, feasibility studies, project charters, and risk registers.

3. Use AI for Scheduling and Resource Optimization:

- Automate the creation of WBS, Gantt charts, and timelines using tools like ClickUp AI, Asana AI, and Forecast.app.

4. Enhance Execution through Workflow Automation:

- Build AI-driven automation workflows using n8n, Zapier, and Make to streamline updates, reminders, and reporting.

5. Leverage AI for Stakeholder Communication:

- Generate executive summaries, dashboards, and visual reports using AI storytelling and presentation tools like Tome and Gamma.

6. Integrate AI in Agile and Scrum:

- Automate sprint planning, backlog refinement, and retrospectives using Jira AI and Monday.com AI.

7. Develop and Present a Capstone Project:

- Execute an end-to-end AI-driven project management case study demonstrating planning, execution, automation, and reporting.

Week 1 – Course Introduction & Project Management Fundamentals

Goal: Build AI literacy—understanding what AI is, what it can (and can't) do, and how it fits into the PM ecosystem.

Saturday (3h): AI Foundations for Project Managers

- The evolving role of a Project Manager.
- Overview of Generative AI in Project Management: LLMs, AI copilots, and agents.
- The AI Project Lifecycle (data, model, deployment)
- AI Ethics, Bias & Governance.
- AI Use-Cases Across Industries.
- Key PM Challenges AI Can Solve.
- Decision Intelligence, Predictive Analytics, and Risk Forecasting.
- Using AI for Scheduling, Resource Optimization, and Reporting.
- Overview of AI-PM Tools: Asana AI, ClickUp Brain, Notion AI, Wrike AI, Forecast.app.

Sunday (3h): Prompt Engineering for HR Data

- Prompt Design Frameworks: zero-shot, few-shot, chain-of-thought
- Structuring prompts for project documentation, scheduling, and reporting
- AI for stakeholder communication – summarizing updates and drafting reports

Hands-On Lab:

- Build a simple “AI Assistant for PM” using ChatGPT or Gemini.
- Generate a project charter and scope statement using AI prompts.
- Use AI to generate a complete Project Initiation Document (PID)

Week 2 – AI for Project Initiation & Planning

Goal: Integrate AI into planning, scoping, and scheduling activities.

Saturday – AI-Powered Project Planning & Initiation

Saturday (3h): Project Initiation Phase + AI Applications

- Business Case Development using AI (writing, refining, ROI analysis)
- AI-Assisted Feasibility Studies
- Generating Project Charters with AI templates
- Components of a Business Case (benefits, costs, ROI)
- Feasibility analysis with AI scoring models
- Risk assessment and probability mapping using Wrike AI
- Building AI-enhanced project plans and milestone schedules

Hands-On Lab: Build an AI workflow that:

- Create a Business Case and Risk Register (ChatGPT + Claude + Google Doc)
- Generate a Gantt Chart & Dependencies (Asana AI / ClickUp Brain)

Sunday (3h): AI for Budgeting, Resource Allocation and Project Planning

- How AI Enhances Estimation (duration, cost, resources)
- Prompting AI to Build WBS, Gantt Charts, and Milestones
- Using Asana/ClickUp/Forecast to Auto-generate Schedules
- Using Forecast.app for resource planning
- AI for schedule optimization and critical-path analysis

Hands-On Lab: Build an AI workflow that:

- **Tool 1:** ClickUp AI – Generating timelines and risk summaries
- **Tool 2:** Asana AI Teammate – Building dependency chains
- **Tool 3:** Notion AI – Creating structured project documentation
- **Case Study:** “AI-Generated Project Plan for a Software Rollout.”

Week 3 – Execution & Workflow Automation

Goal: AI as your Project Assistant — executing, tracking, and updating automatically

Saturday (3h): AI Agents & Automation Tools (n8n, Zapier, Make)

- Introduction to n8n, Make and Zapier
- Automation concepts (triggers, actions, conditions, loops)
- Integrating AI workflows with ClickUp and Trello
- Ethical considerations in AI-driven automations

Hands-On Labs:

- Build an Automation that pulls ClickUp / Trello task data → summarizes progress → emails stakeholders
 - **Tool:** n8n → Trigger AI workflows for reminders & updates
 - Deliverable: Automated Weekly Status Report Workflow

Sunday (3h): AI for Reporting & Stakeholder Communication

- AI storytelling techniques for project narratives
- AI-driven storytelling: turning data and updates into compelling reports
- Tools for presentation and executive reporting: Tome, Gamma, PowerPoint Copilot
- Automating recurring project updates and client reports with AI
- AI-assisted conflict resolution and feedback loops

Hands-On Lab:

- Create a visually rich AI-generated Executive Status Report

Week 4 – Agile & Scrum with AI

Goal: Enhance Agile methodologies with AI for adaptive execution.

Saturday (3 hr) – AI in Agile Planning & Execution

- Overview of Agile frameworks (Scrum, Kanban)
- Automating sprint planning and backlog refinement
- AI for story creation and acceptance criteria definition
- Predictive velocity and team capacity analytics

Hands-On Labs

- Auto-create user stories (Jira AI Assistant)
- Generate sprint burndown charts (Monday AI / Trello AI)

Sunday (3 hr) – Continuous Improvement & Retrospectives

- Using AI for retrospective analysis and team feedback
- AI metrics for velocity and cycle time
- Building learning loops with AI survey bots (Zapier / n8n)
- Embedding AI into Scrum ceremonies (stand-ups, reviews)

Hands-On Labs

- Build a retrospective automation workflow
- Generate a continuous-improvement report

Week 5 / 6 – Capstone & Future of AI in PM

A full end to end AI in Project Management Case Study

Generative AI for Business Analysis

Course Overview

The Generative AI for Business Analysis course is designed to prepare modern Business Analysts (BAs) to leverage Artificial Intelligence—particularly Generative AI (GenAI) tools, copilots, and automation platforms—to enhance analytical thinking, streamline documentation, improve stakeholder engagement, and drive smarter business decisions.

The course introduces participants to AI-empowered analytical frameworks across the full project lifecycle — from initiation and requirements gathering to execution, monitoring, and closure. Each module blends theory with hands-on practicals using AI tools like ChatGPT, Gemini, Coda AI, Notion AI, ClickUp AI, Miro AI, Perplexity AI, Lucidchart AI, Whimsical AI, Tome, and Gamma.

By the end of this program, learners will not only understand the traditional BA processes but also be able to automate and optimize them with AI, positioning themselves as next-generation Business Analysts capable of bridging the gap between business goals and intelligent systems.

Target Audience

This course is designed for:

- Aspiring and practicing Business Analysts seeking to integrate AI tools into their workflow.
- Project Managers, Product Managers, and Data Analysts looking to strengthen analytical and documentation skills through AI.
- Consultants and Digital Transformation Professionals who want to leverage GenAI for business optimization and requirement gathering.
- Students or career switchers transitioning into Business Analysis or related tech/business roles.
- Entrepreneurs and innovation managers aiming to adopt AI to enhance business decision-making and operational efficiency.

No coding or advanced AI background is required — just curiosity, analytical thinking, and a willingness to learn new tools.

Course Objectives

By the end of this course, participants will be able to:

- 1. Understand the Integration of AI in Business Analysis:**
Explain how AI transforms core BA activities such as stakeholder analysis, requirement elicitation, documentation, and reporting.
- 2. Use Generative AI Tools for Stakeholder Management:**
Apply AI to identify stakeholders, build RACI matrices, design communication plans, and generate influence maps.
- 3. Automate Requirement Gathering and Documentation:**
Use AI platforms to generate BRDs, PRDs, and flow diagrams from text prompts and discussions.
- 4. Leverage AI in Project Planning and Risk Analysis:**
Apply AI to forecast risks, optimize resources, and design dynamic project roadmaps.
- 5. Enhance Agile Implementation with AI:**
Utilize AI assistants like Jira AI, Azure DevOps Copilot, and ClickUp AI for sprint planning, backlog management, and retrospectives.
- 6. Monitor, Control, and Close Projects with AI:**
Use AI to track KPIs, generate UAT scripts, build performance dashboards, and document lessons learned.
- 7. Complete a Capstone Project:**
Deliver a full end-to-end AI-driven Business Analysis case study integrating multiple tools and demonstrating mastery of AI-augmented BA practices.

WEEK 1 — PROJECT INITIATION & AI-ENABLED STAKEHOLDER MANAGEMENT

Goal: Define, plan, and initiate an AI project — identify stakeholders and align goals using AI tools.

Project Lifecycle Focus: Initiation Phase

Saturday (3 Hours)

- What is Project Management?'
- Business Analysis vs Project Management vs Product Management
- The Role of AI in Modern Project Management
- Project Life Cycle & Organizational Structures
- Understanding Business Objectives and Defining Project Scope
- Stakeholder Identification, RACI Matrix, and Communication Plan

Hands-On Practical (AI Tools)

Tool	Activity
ChatGPT / Claude 3	Generate a <i>Project Charter</i> and <i>Business Objective Statement</i> using AI prompts.
Notion AI	Build a <i>Stakeholder Register</i> and <i>RACI Matrix</i> automatically.
Perplexity AI	Research real-world AI-driven projects to define your project objective.
MyMap.AI / Miro AI	Create a <i>Stakeholder Influence Map</i> or <i>Communication Flow Diagram</i> from text prompts.

Sunday (3 Hours)

- Building a Business Case
- Stakeholder Identification & Analysis
- RACI Matrix & Communication Plan
- Understanding KPIs & Success Metrics for AI Projects
- Risk Identification and Management
- Setting AI Project Performance Measures

Hands-On Practical (AI Tools)

Tool	Activity
ChatGPT / Gemini	Create a <i>Business Case</i> with risk and cost-benefit analysis.
Miro AI	Create a <i>Stakeholder Influence Map</i> and link it to communication channels
Coda AI	Auto-generate <i>Business Case Template</i> and KPI tracker
Tome AI / Gamma App AI	Create a <i>Business Case Presentation Deck</i> automatically from your Notion data.

Deliverables

- AI-generated Business Case Document
- KPI Dashboard in Power BI
- Business Case Presentation

WEEK 2 — PROJECT PLANNING, REQUIREMENTS & ROADMAP DESIGN

Theme: Develop the roadmap, define requirements, and prepare AI-powered execution frameworks.

Project Lifecycle Focus: *Planning Phase*

Saturday (3 Hours)

- Work Breakdown Structure (WBS)
- Scheduling, Dependencies, and Milestones
- Requirements Gathering and SMART Framework
- AI-Powered SDLC Overview (Waterfall, Agile, Hybrid)

Hands-On Practical (AI Tools)

Tool	Activity
ClickUp AI / Asana Intelligence	Auto-generate <i>WBS</i> and task dependencies.
ChatGPT / Notion AI	Generate <i>Requirements Document (BRD/PRD)</i> from prompts.
Lucidchart AI / Whimsical AI	Convert text requirements into flow diagrams or use-case maps.
Coda AI	Create auto-linked Requirements Register with acceptance criteria.

Sunday (3 Hours)

- Estimation Techniques (Time, Cost, Resources)
- AI for Risk Forecasting and Budget Planning
- Resource Allocation and Capacity Planning
- Building a Project Roadmap.

Hands-On Practical (AI Tools)

Tool	Activity
Motion AI	Auto-schedule project tasks and optimize team time allocation.
Perplexity AI	Research comparable projects to generate risk scenarios and mitigation plans.

Trello AI / ClickUp AIBuild an *AI-generated Project Roadmap*.

WEEK 3 — PROJECT EXECUTION & AGILE IMPLEMENTATION

Theme: Manage project execution using Agile methodologies with AI tools for automation and collaboration.

Project Lifecycle Focus: *Execution Phase*

Saturday (3 Hours)

Lecture Topics

- Agile & Scrum Framework
- Scrum Roles, Artifacts, and Ceremonies
- AI in Agile Project Management (Automation, Backlog Generation)
- Jira & Azure DevOps Overview

Hands-On Practical (AI Tools)

Tool	Activity
Jira AI Assistant	Set up <i>Epics, Stories, and Backlogs</i> automatically from requirements.
Azure DevOps Copilot	Create <i>User Stories</i> and <i>Acceptance Criteria</i> using AI.
ChatGPT / Confluence AI	Generate <i>Sprint Goals</i> and <i>Retrospective Summaries</i> .
MyMap.AI	Map user journeys and story flows for AI product features.

Sunday (3 Hours)

- Collaboration and Communication in Agile
- AI-Enhanced Daily Stand-Ups and Status Updates

- Change Management and Risk Monitoring

Hands-On Practical (AI Tools)

Tool	Activity
Fireflies AI	Record a <i>Sprint Review Meeting</i> and extract AI summaries.
ClickUp AI / Notion AI	Auto-generate <i>Project Status Reports</i> and <i>Change Logs</i> .
Miro AI / Whimsical AI	Create a dynamic Change Impact Diagram.

WEEK 4 — MONITORING, CLOSURE & CAPSTONE PROJECT

Theme: Monitor project performance, deploy final outputs, and review success using AI-driven insights.

Project Lifecycle Focus: *Monitoring & Closing Phase*

Saturday (3 Hours)

- Monitoring & Controlling with AI
- UAT (User Acceptance Testing) and QA Automation
- Performance Tracking and KPI Evaluation
- Lessons Learned Documentation

Hands-On Practical (AI Tools)

Tool	Activity
ChatGPT / Claude 3	Generate <i>UAT Scripts</i> and <i>Testing Templates</i> .
Coda AI	Build UAT checklist & defect tracking sheet with AI formulas.

Notion AI	Document <i>Lessons Learned and Recommendations</i> .
Miro AI	Visualize team performance and bottleneck map.

Sunday (3 Hours)

- Project Closure Process
- Final Review and Handover
- Post-Implementation Evaluation
- Continuous Improvement in AI Projects

Hands-On Practical (AI Tools)

Tool	Activity
Tome AI / Gamma App AI	Build a <i>Final Project Closure Presentation Deck</i> .
Grammarly GO / Google Docs AI	Polish the <i>Final Project Report</i> .
ChatGPT o1-mini	Generate <i>Executive Summary & Next Steps Document</i> .
Lucidchart AI / Whimsical AI	Generate project retrospective diagram showing milestones vs outcomes.

Week 5 / 6 – Capstone & Future of AI in BA

- A full end to end AI in Business Analysis Case Study

Phase	Key Deliverables	AI Tools
Initiation	Charter · Stakeholder Matrix	Perplexity AI · ClickUp AI · MyMap.AI
Planning	WBS · Requirements Doc · Risk Register	Coda AI · Lucidchart AI · Miro AI
Execution	Agile Board · Sprint Summary · Change Log	ClickUp AI · Confluence AI · Whimsical AI
Closure	UAT Report · Lessons Learned · Final Deck	Coda AI · Motion AI · Lucidchart AI
